

After beginning his biomedical research career in the mid-90's as a SAS statistical programmer and clinical data analyst, Che eventually broadened his quantitative foundation by obtaining an international relations graduate degree; this enabled a greater understanding of the industry's regulatory and compliance-related dimensions. After two decades of experience working for pharmaceutical firms, contract research organizations, and academic research centers, Che launched Milestone Regulatory Experts, LLC in 2017 to provide cost-efficient and exemplary service to clients seeking assistance with regulatory affairs, regulatory submissions, GCP auditing/monitoring/compliance, project management, training/curriculum development, or professional speaking services.
